Blanchester Public Water System

Replacement of Faulty Service

If any portion of a service pipe between the curb stop and the entrance of the building becomes faulty, the entire line must be replaced and approved by the Water Department unless an alternative repair has been approved by the Water Department. The Water Department reserves the right to discontinue service when water is willfully wasted using improper, imperfect, or worn-out service pipes. All replacement service pipe must be either copper or CTS plastic as outlined in the current version of the water distribution specifications.

When the service pipe between the curb stops and entrance of the building is found to be composed of lead or steel, the entire line must be replaced before service will be re-connected. Water department personnel, will offer to replace the line at the actual cost, based on time and materials needed.

When a new service line is installed by Water Department personnel, the **Property Owner** will have 30 days to pay the bill covering the installation, unless prior arrangements or payment agreement has been approved.

Alternatively, the property owner may hire a private contractor to install the line.

This Policy to be voted on by Board of Public Affairs Chairman, and BPA Trustees. Once approved this will be added to the official minutes and become Public Policy.
